FOR IMMEDIATE RELEASE – June 8, 2009

Platte River Networks Introduces Power of Intuition
On-Demand Network Monitoring & Preventative Maintenance Solution
Utilizes State of the Art Dell Technology

Denver, Colo.– June 8, 2009 -- Leading Denver IT support and networking solutions provider, Platte River Networks, today announced the launch of Intuition, their new on-demand network monitoring and remediation suite of services. The Intuition solutions utilize Dell technology, offering expert response and remediation services and reliable, end-to-end network and hardware oversight. Intuition is ideal for businesses with mission-critical information or compliance issues such as financial services, legal and medical organizations.

Intuition combines advanced monitoring technology with professional remediation expertise to provide companies with IT thought leadership and the ability to avert crippling network issues and expensive downtime. Intuition also provides enterprises round the clock visibility and protection against network outages, hardware failures, and security vulnerabilities such as hacking, employee malice and cybercrime.

The launch of Intuition responds to current demand from the IT community for improved network monitoring solutions that will increase network uptime and save on costly reactive repairs and troubleshooting.

“Intuition easily integrates and augments current IT infrastructure with the highest level of protection available today,” said Tom Welch, Platte River Networks Partner. “We can customize the technology to enhance unique set-ups, or offer soup-to-nuts installation, monitoring and remediation services. The product’s flexibility and support are ideal to maximize the IT investment.”

In recent years, disaster recovery and business continuance have become a necessity for companies of all sizes. Network monitoring and remediation are at the forefront of IT planning to avoid data loss and catastrophic network events that threaten the existence and success of most businesses. In fact, studies show only 6% of companies that have experienced a major loss of business data will survive long-term. A staggering 51% will shut down within two years, and 43% will close their doors for good.

”More than the risk of suffering downtime due to disasters such as terrorist strikes, hackers and natural disasters, companies are even more susceptible to internal network problems--such as server crashes and failed back-ups,” added Brent Allshouse, Partner, Platte River Networks. “Intuition fully utilizes the most overlook principle of Disaster Recovery and Business Continuity 101: Preventative Maintenance.”
